

Saltwater coating can help make your cloth masks impermeable to viruses.

Basic brine ratio:

4 tablespoons of salt per 1 quart (4 cups) of water.

Bring to a boil and let cool.

You can add essential oil at this point if wanted. (Only a small amount so you don't over power the smell on your mask).

Put masks in water and leave long enough to be fully saturated.

Do not Rinse.

Remove and let air dry.

- Wash in hot soapy water as needed and repeat the brine soak.
